## Education

### Northern Arizona University

Aug 2022 – May 2025

*BS in Software Engineering*

- **Coursework:** Operating Systems, Data Structures, Software Testing, Applied Cryptography

## Experience

### Advanced Course in Engineering Intern

Rome, NY

*Griffiss Institute*

May 2024 – Aug 2024

- Highly competitive and immersive cyberwar fighting internship
- Gained a deep understanding of leadership, fellowship, and problem solving
- Participated in weekly operations, weekly case studies, and technical lectures with a challenge problem.

### IT Technician

Flagstaff, AZ

*Northern Arizona University*

October 2022 - Present

- Provide software, data, and hardware support to students personal machines
- Established and maintained hundreds of thousands of dollars worth of University computers for faculty and staff.

## Projects

### Stenography tool

- Developed a stenography-based tool that allowed the user to provide as many images as they would like and a long string of text to insert into the images.
- This tool was built for the Covert Channel lecture during the ACE internship.
- The purpose of this tool is for a seemingly normal website to send data from the server to the client by only using normal activity to bypass any firewall.
- **Tools Used:** Python

### Super Simple Ticketing System

[SSTS](#)

- Developed a simple ticketing system for an IT Organization that allows for a customer to call in and submit a service request.
- **Tools Used:** Flask, Python, JQuery, MongoDB, HTML, CSS, and JS

### Race Tracker

[Race Tracker](#)

- Currently developing a race tracker that will score a runner's time as they past the finish line. The tracker will allow a runner to have a RFID that gets scanned when the past the finish line to stop their time.
- **Tools Used:** Flask, SQLite, Python, HTML, CSS, JS

### Low Level Operating System Simulator

[Operating System](#)

- Built a UNIX-style OS with a the ability to create process control blocks, output to display or file.
- The simulator uses a variety of scheduling methods such as Round Robin and Shortest Job First to manage tasks.
- **Tools Used:** C

## Technologies

**Languages:** C++, C, Python, SQL, NoSQL

**Technologies:** XCode, VSCode, PyCharm, BurpSuite, AWS, Postman
